

COBO Germany Services

Control, Software and Service Solutions

COBO develops complete control systems for machines. From system architecture and software to safe commissioning, each solution is tailored to the customer's technical and operational requirements.

ENGINEERING AND DEVELOPMENT

01 Control Systems Design

COBO designs the complete control system for a machine and develops a solution tailored to the customer's requirements.

02 Software Design and Development

COBO's 3B6 division develops software and applications for integrated control and operator interface solutions. Sensors, controllers and displays are combined into a coordinated system. Current standards include WYSIWYG user interfaces, IEC 61131, and C and C++ for specialist or safety-related applications.

03 Safety Systems in Accordance with EN ISO 13849-1

COBO supports the determination of the required Performance Level. The assessment considers MTTf, diagnostic coverage, common cause failures and the final PL calculation using standardised methods.

Service und Support

From Initial Testing to Fast Repairs

04 Commissioning

COBO ensures that systems and components are designed, installed, tested, operated and maintained in line with the customer's operational requirements.

05 Customer Service

With extensive experience and modern technology, COBO provides reliable support throughout ongoing operations, allowing customers to focus on their other business priorities.

06 Repairs

Systems and components developed and manufactured by COBO can be inspected and repaired quickly on request.
